Coming Up

EWMA BARCELONA

Dr. Romberg will be presenting a
abstract about treating
Suppurative Myositis with Kerecis
fish graft this upcoming March
2025 at the European Wound
Management Association in
Barcelona, Spain

Our Latest Project

WE ABSOLUTELY LOVED
WORKING WITH THIS CLIENT!

Influencer, Natalie Mariduena visited back in November. She underwent 1 CellSound treatment to tone and define her abdomen. She lost about 1 inch on her waist in 40 minutes.

CellSound's innovative technology helped her continue to lose fat outside of the treatment, while also tightening the skin, increasing muscle volume & metabolism, and encourage lymphatic drainage.

Cellsound regenerates and contours the body with Electrosonic Resonance. It does not cause apoptosis (cell death) or paradoxical adipose hyperplasia (growth of fat cells after CoolSculpting/Cyrolipolysis treatments).

The Future of Pelvic Floor Therapy

EMSELLA

Dr. Michael Romberg MD, FACS, was on WGN Daytime Chicago in October.

Emsella is a chair that is for both males and females to strengthen their pelvic floors with High-Intensity Focused Electromagnetic Energy. Patients sit on the chair fully clothed and let the chair stimulate thousands of pelvic floor contractions. This helps improve blood flow and restore neuromuscular control in the pelvic floor.

Each session stimulates 11,200 Kegels in 28 minutes.

- Stop urinary incontinence
- Increase sexual sensitivity
- Postpartum repair
- Erectile Dysfunction treatment
- Increase Post-Menopausal Vaginal lubrication
- Increase pelvic floor function
- Pelvic organ prolapse

Most patients notice improvements within days or weeks of their first session. Optimal results typically appear 4-6 weeks after completing the recommended treatment plan.
